

Health and Safety Risk Assessment for Cefngwyn – NAMHO 2019

Cefngwyn mine consists of 2 levels one of which is usually flooded up to the roof and does not go far. A second level is usually dry and although just atrial is quite extensive and interesting.. Exploration requires only basic kit of good boots, helmet, and electric lamp

The mine is very stable with no unexpected dangers or hazards and has archaeological and geological value while presenting a very easy explore to underground visitors.

Hazard	Description	Mitigation
General Hazards	Uneven floor with strewn rocks as usually encountered underground.	Individual explorers should be suitably attired for underground exploration with sturdy boots or wellies and exercise a reasonable amount of care.
